Why is the squirrel burying an acorn?

He lives underground.

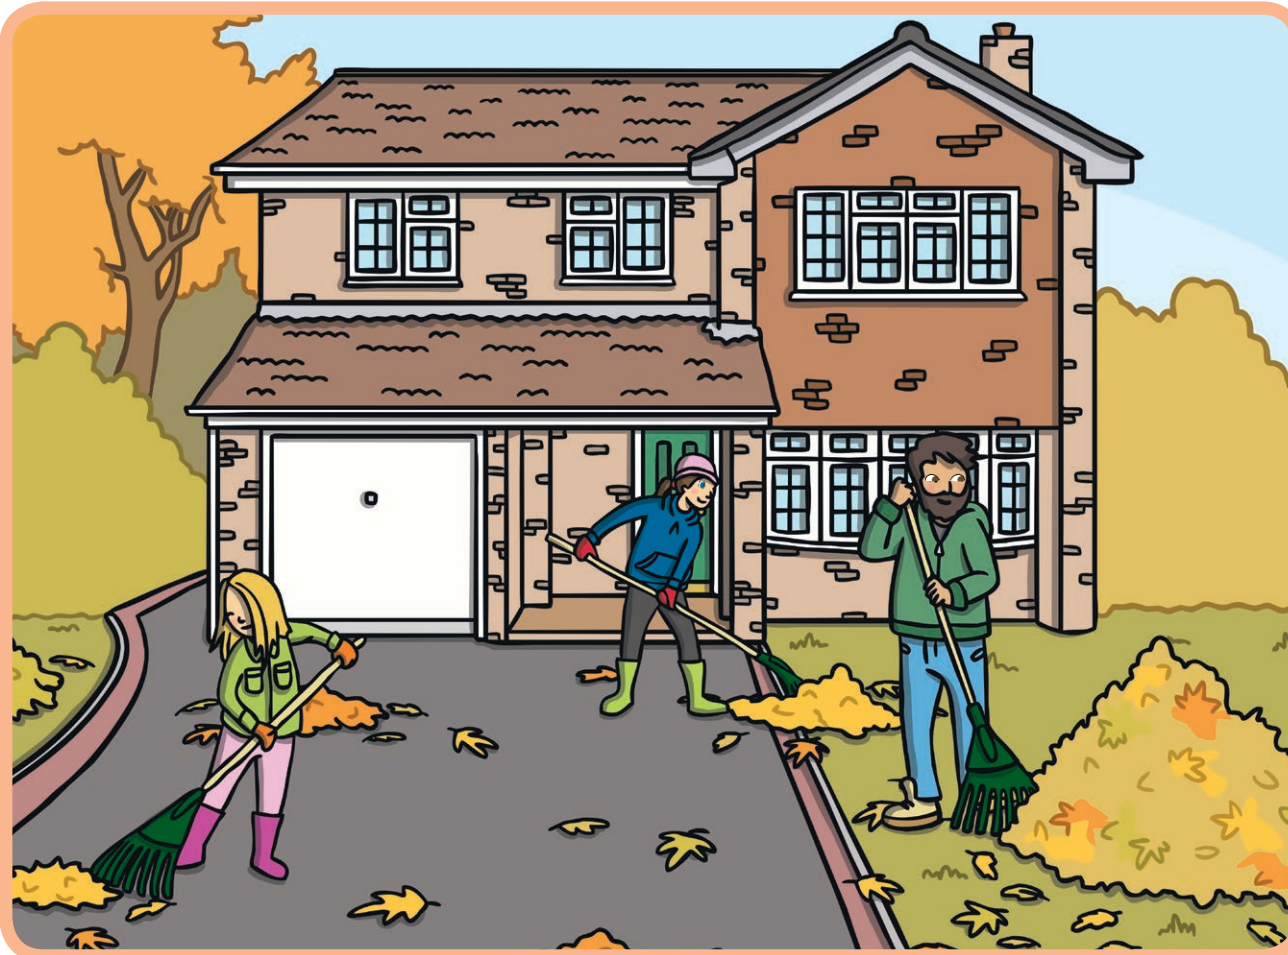

He does not want to share the nuts with other squirrels.

He will need food in the winter when there are not as many nuts.

Why is the family raking leaves in their yard?

The squirrels knocked off all the leaves when they ran on the branches.

The leaves fall off the trees during fall when there is not enough sunlight.

The wind blew off all the leaves from the trees.

Why do the leaves change color?

The tree has been polluted,
and it causes the leaves to
turn yellow.

The sun burns the leaves, and
they turn yellow and orange.

The day is shorter in the
fall, and the tree doesn't get
enough sunlight.

Why is the dog's fur so thick?

Dog's grow thicker fur during fall to prepare for winter.

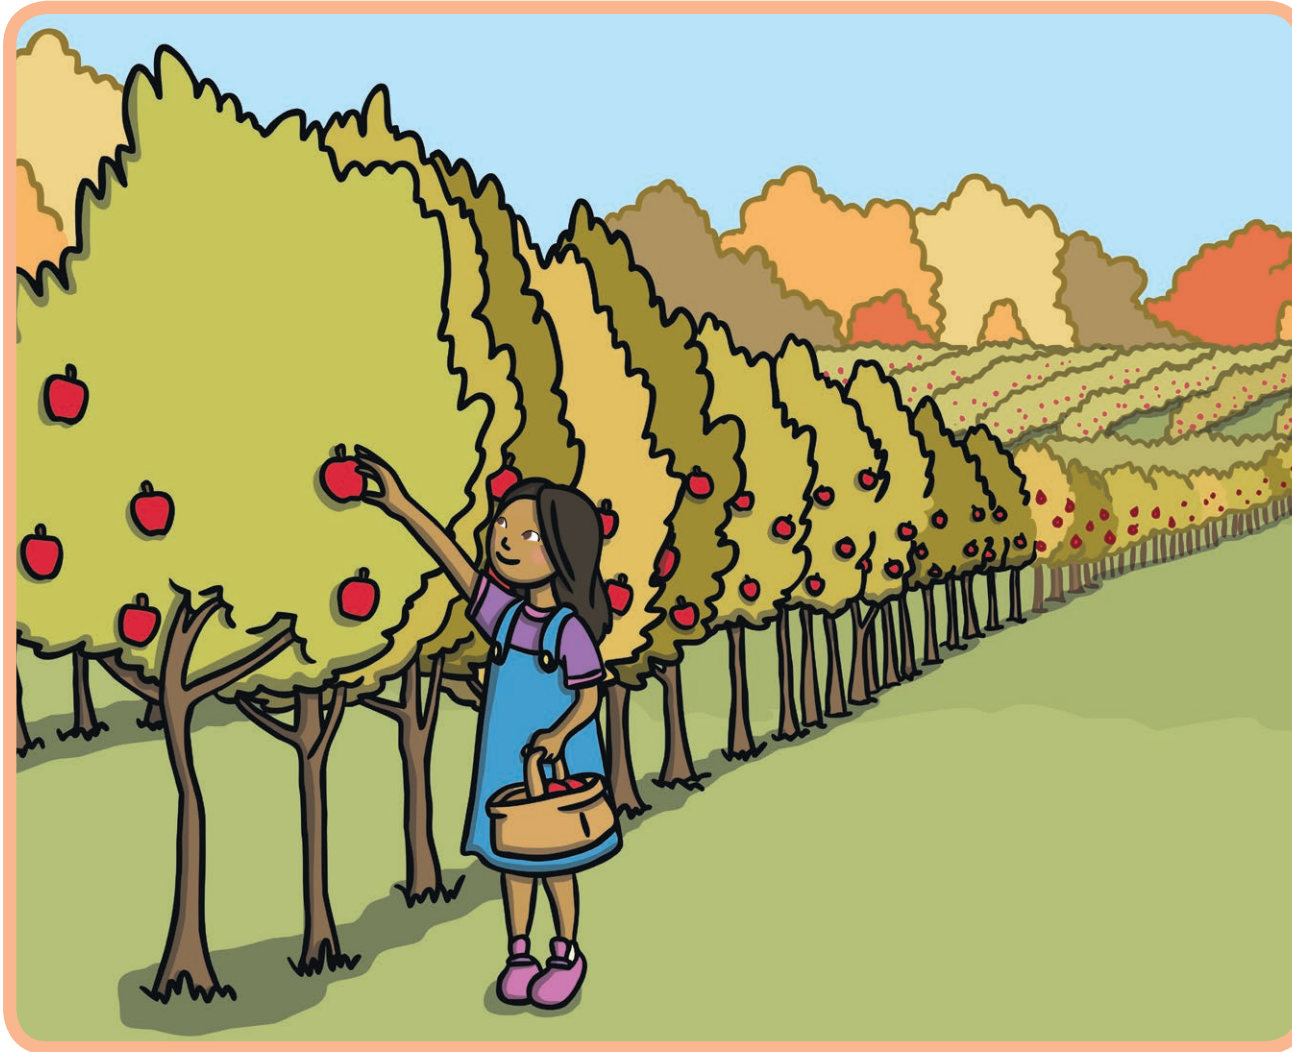

The dog's fur becomes thicker as it gets older.

The dog's fur will protect him from mosquitos.

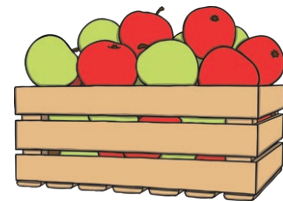

Why is the girl picking apples?

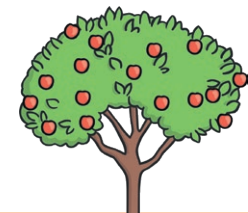

The apples went bad during the summer.

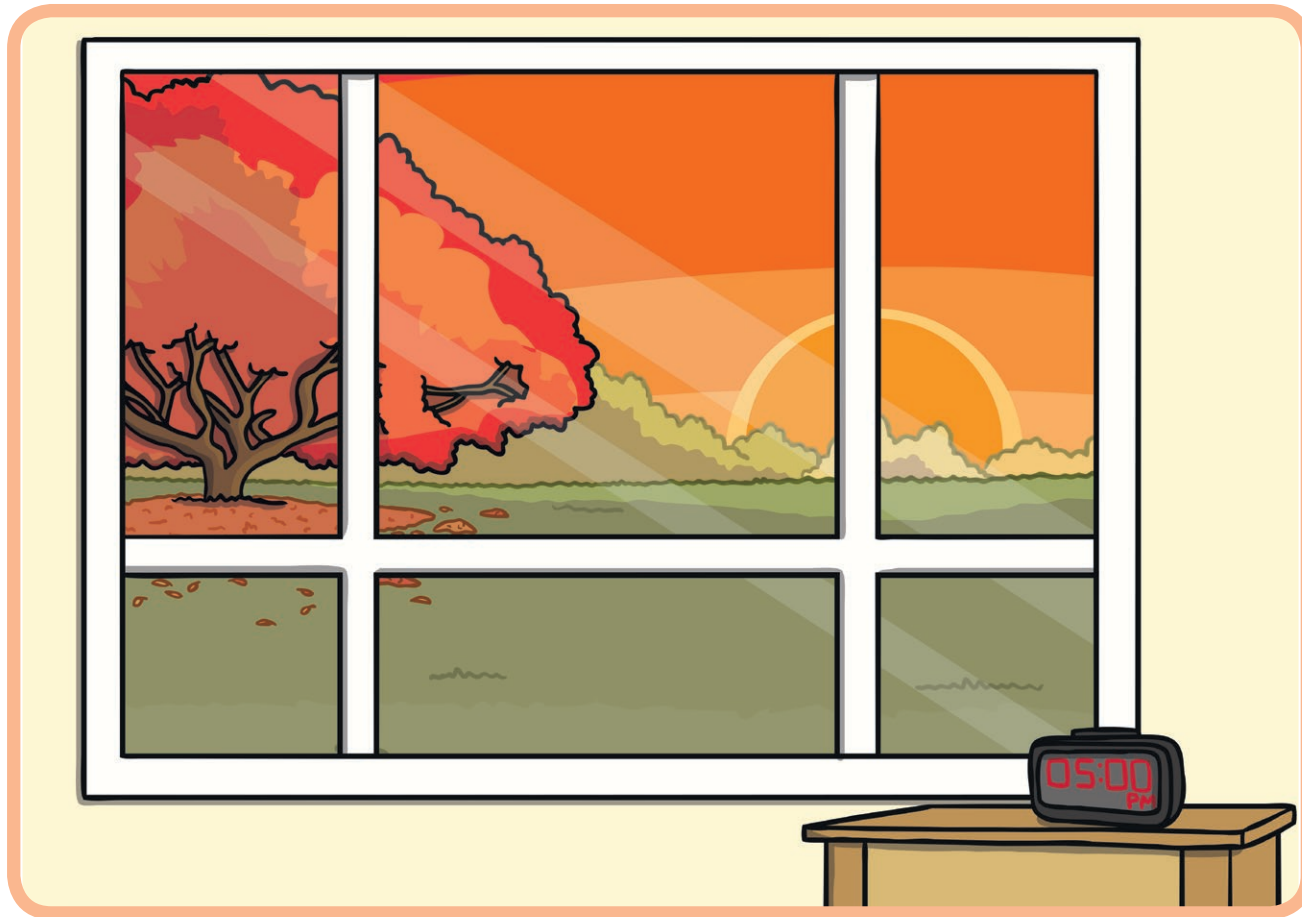

The peak of apple picking season is in the fall.

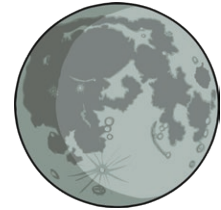

Too many apples are growing on the tree.

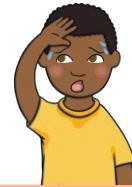

Why does the sun go down earlier in the fall?

The days get shorter in the fall.

The Earth is too hot during summer, so it needs to cool down.

The sun needs to recharge after summertime.
