Baby Animals

SCHOLASTIC

A baby seal is called a pup.

Pup

Seal

**Seals use their flippers to swim.
How many pups do you see?**

**GUESS
WHAT?**

**A pup drinks
its mother's milk.
The milk helps the
pup's blubber grow.
Blubber keeps
seals warm.**

A baby leopard is called a cub.

Cub

Leopard

Leopards can run fast and jump high.
How many cubs do you see?

**GUESS
WHAT?**

Cubs live
with their mothers
for two years before
they go out on
their own.

A baby elephant is called a calf.

Calf

Elephant

Elephants use their trunks to smell, breathe, drink, and eat. How many calves do you see?

**GUESS
WHAT?**

**A newborn
calf weighs around
300 pounds—about
the same as a
refrigerator!**

A baby duck is called a duckling.

Duckling

Duck

**Ducks have long beaks called bills.
How many ducklings do you see?**

**GUESS
WHAT?**

**Ducklings
hatch from eggs.
After eight weeks,
they can fly.**

A baby frog is called a tadpole.

Tadpole

Frog

**Frogs breathe through their skin.
How many tadpoles do you see?**

**GUESS
WHAT?**

**Tadpoles are
born without legs.
Their tails disappear
as they get
older.**

Look at all the animals.
Can you match the baby
to the adult?
