## Interview the Group

In this interview activity, students work in groups of six. Each student interviews the other group members about the topic on their interview form. The group members reply using Yes/No answers and adverbs of frequency.

Make one copy of the worksheets for every six students and cut up as indicated.

### Procedure

Divide the class into groups of six.

Give each student one of the six interview forms.

Explain they will interview each other and record their group member's answers on the interview form.

The students now start interviewing the other people in their group and making a note of the answers they get.

When everyone has finished, each student writes down five sentences based on the results they received, using the following pattern (It can be written on the board).

Most people...  
Almost everyone...  
Two/Three people...  
Only one person...  
Hardly anyone...  
No one...

Students then report back to the class on their findings.
