Advice Dominoes

In this engaging activity, students play a game of dominoes to review the language for giving advice.

Before class, make one copy of the dominoes for each group of three and cut as indicated.

Procedure

Divide the students into groups of three.

Give each group a set of shuffled dominoes. Ask the students to place the dominoes face down in a pile on the desk.

Tell each group to turn over the top domino and place it face up on the desk.

Students then take it in turns to pick up one domino from the top of the pile.

If they can, they must place their domino at either end of the first domino to make a sentence for giving advice.

If they can't, they keep the domino in their hand.

The other students judge if the sentence is correct, but they can also ask you if they are unsure.

Students continue to take turns to link the dominoes, either using the one in their hand or taking a new one from the pile.

When all the dominoes have been taken from the pile, students take turns to try to put a domino down from their hand.

The first student to get rid of all their dominoes is the winner.

The correct answers appear on the uncut worksheet.
